DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1, 2, 4-7, 9-12, 14-16, 18 and 20-22 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's admitted prior art.

Applicant's admitted prior art Fig. 3 disclose the claimed invention. 1. A method for controlling a DC-DC converter (1a) wherein the DC-DC converter includes a first capacitor (C3), a second capacitor (C2), a diode (D2) connected in series with the first capacitor, and a main switching transistor (T1) having a source, a gate, and a drain, connecting the diode and the first capacitor that are connected in series with each other between the source (Vin) and the drain of the main switching transistor; activating and inactivating the main switching transistor; generating gate voltage to drive the main switching transistor by connecting the second capacitor in parallel to the first capacitor or by disconnecting the second capacitor from the first capacitor in synchronism with the activation and inactivation of the main switching transistor, rectifying transistor (T2), control circuit (12), voltage dividing resistors (R1 and R2), an error amplifier (4), a triangular wave oscillator (5), a PWM comparator (6) and drive circuits (8a and 8b).

Allowable Subject Matter

3. Claims 3, 8, 13, 17 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter: None of the cited prior art disclose or teach a DC-DC converter with a voltage monitoring circuit for monitoring the second capacitor and controlling the connection and disconnection of the first capacitor and the second capacitor in accordance with the monitored voltage of the second capacitor.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
